Abstract

ESTEP annual conference held between 3 and 5 October 2023 brought together the steel community to discuss the issues surrounding, *"the circular economy driven by European steel"*. The Celsa group invited the steel community to the Gallery Hotel in the heart of Barcelona, Spain for showcased contributions to ensuring the development of a made-in-Europe, sustainable EU cleantech value chain with steel at its core. Prominent speakers from the European Commission, leading research institutes, steel companies, innovation-awarded startups, and key actors from the steel value chain participated in the conference.

Following a long series of events on innovation, research, and technology, the aim of this year's ESTEP annual conference was to support the transformation and position of the EU as a global circular economy powerhouse.
