

Circular Steel for Mass Market Applications

Introducing scrap-based Electric Arc Furnace steel for a greener circular economy in mass-market sheet metal goods

42 months duration
01/10/2024 to 30/04/2028

Grant agreement ID:
101177798

Budget: € 4.380.528
100% funded by the EU

Coordinated by
Eurecat, RTO

13 partners from
5 different European countries

Funded by
the European Union

The CISMA project has received funding from the European Union Horizon Europe Programme: project num 101177798. Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Health and Digital Executive Agency (HADEA). Neither the European Union nor the granting authority can be held responsible for them.

Challenge 1: Analyzing the Effect of Residual Elements

Demonstrating the 100% recycled steels in mass-market products

High Strength Steel (DP)

Cold Rolled HSLA

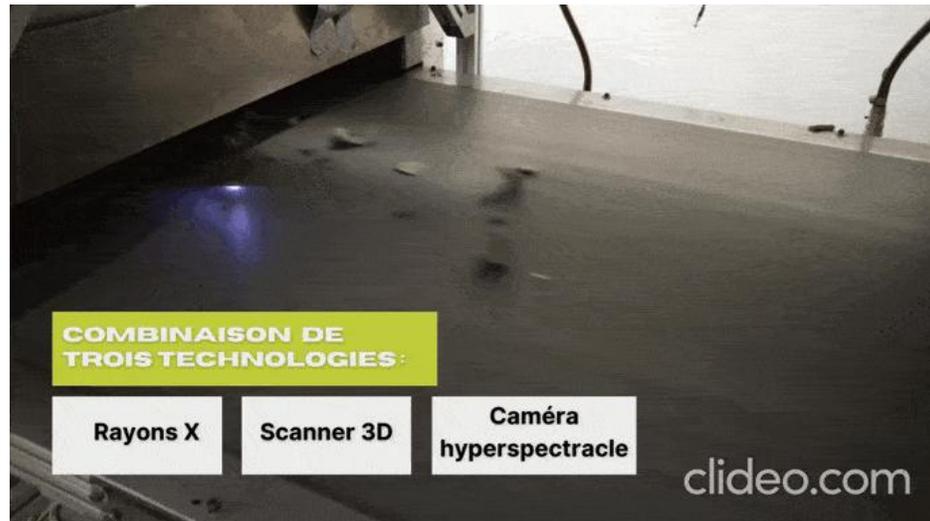

Interstitial-Free Steel

Challenge 2: Scrap as a Raw Material

Robotic Sorting

Common robotic sorting problems
(e.g. Aluminium sorting)

- 60% of the stream could be considered as waste when targeting specific alloys (e.g. 5xxx, 6xxx)
- The target classes are removed from the belt during the sorting
- Quality is more important than the throughput

CISMA robotic challenges

- Less than 2% of the stream could be considered as waste
- Negative sorting: The target classes stay on the belt
- High throughput is crucial

VS

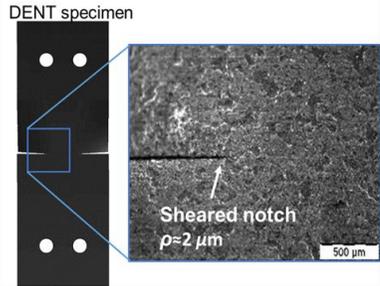

Challenge 3: Fast and Accurate Characterization

Fast testing methodologies

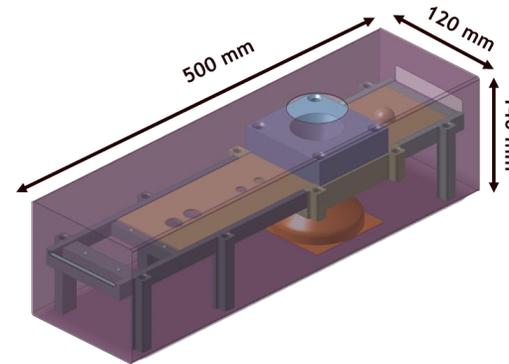

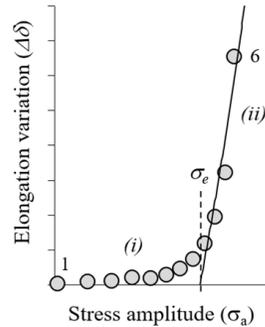

(Soft) real-time testing

Essential Work of Fracture

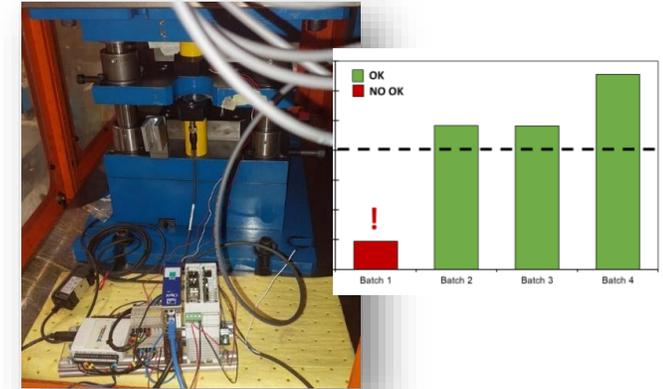

Fast Fatigue Studies

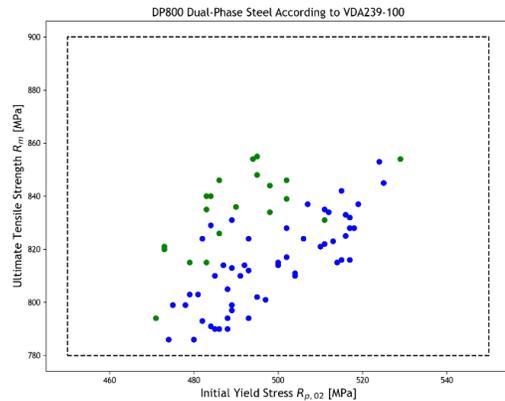

Digital model of Inservice Formability Test

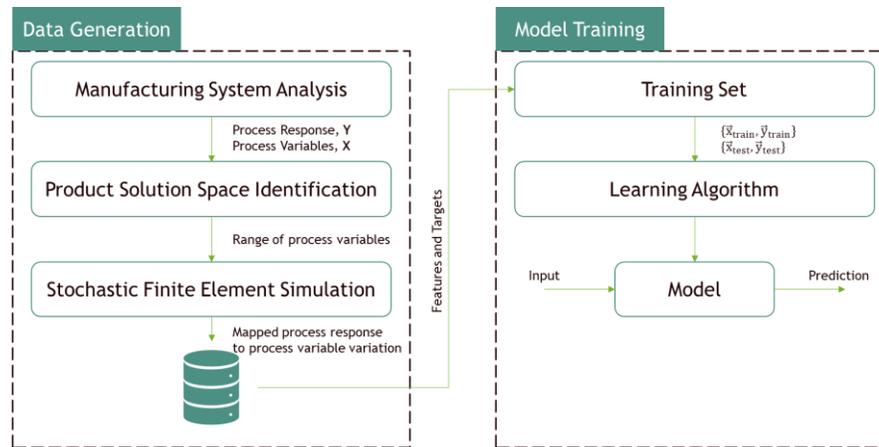

Smart punching tool

Challenge 4: Data-Driven Adoption of Recycled Steel

--- DP800 Allowed Range ● DP800 (Supp. C) (n = 20)
● DP800 (Supp. B) (n = 54)

Numerical Data-Driven Robust Process Window
